Workshop on Integrated Approach for Monitoring Quality of Laboratory Results

29.04.2022 | FROM 09H30 TO 13H00

FORMADOR | DR. PIET MEIJER

LIMITED TO 24 PARTICIPANTS

Course outline

It is the responsibility of a medical laboratory to provide both accurate test results and reliable information to the physician in order to make it possible to correctly diagnose a patient and/or monitor treatment.

All information provided by the laboratory is the result of a complex process and it is the responsibility of the laboratory to monitor the quality of this entire process.

In this workshop the participants are trained in how to monitor the quality of the various aspects of the entire laboratory process. For this purpose, several real clinical scenario's are presented which are used throughout the workshop to build up an integrated approach for monitoring quality of laboratory results and information provided to the physician.

During the workshop the different aspects of the entire laboratory process and how to monitor the quality of each step are discussed. After this workshop participants should be able to set-up an integral approach for monitoring the quality of laboratory results as well as information provided to the physician.

This will be an interactive workshop. After a short introduction on the topic, participants worked together in small groups of 3 – 4 people on exercises. The results of the exercises will be discussed plenary.

Curso de Atualização em Parasitologia Médica

29.04.2022 | 09H30 A 13H00

FORMADOR | DRA. TERESA BAPTISTA FERNANDES

LIMITADO A 30 PARTICIPANTES

- Parasitoses intestinais, uro-genitais e tecidulares
- Biologia, epidemiologia, distribuição geográfica e abordagem ao diagnóstico de parasitoses abertas e fechadas
